

Three compositions. One real service problem.

Compared with the same queue: 041 called; 042–045 waiting; 046–048 pending. Palette does not decide the layout.

EDITORIAL / PLACE FIRST

A little more day.

Fast operating surface; needs warmth in consumer pages.

SPATIAL / CONTEXT FIRST

Corner House

View outlet and request a spot

View place

Useful for geography; weak as the default queue model.

Decision: editorial consumer + operational merchant. Map remains an alternate discovery view.

Do not blend all three layouts. Use shared type, spacing and status language; let each role organise its own tasks.

Typography comparison → IBM Plex family selected

Same labels and numbers; judged for warmth, scan speed, numeric clarity and consistency across roles.

INTER / TECHNICAL CLARITY

Find a place. Make room for your day.

045 Waiting 3 waiting ahead

Email address

you@example.com

Precise and efficient, but visually close to the current generic product.

IBM PLEX SANS / HUMANE PRECISION

Find a place. Make room for your day.

045 Waiting 3 waiting ahead

Email address

you@example.com

Selected for all UI: clear numbers, open forms, a more recognisable voice.

IBM PLEX SERIF / EDITORIAL WARMTH

Find a place. Make room for your day.

045 Waiting 3 waiting ahead

Email address

you@example.com

Selected only for consumer headlines; never for dense queue rows.

Consumer / Discover

FINAL • List first. Select a business, then choose its outlet. No unverified wait times or “nearby” promises.

DESTRUCTIVE CONFIRMATION

Leave this queue?

You will lose your place. This cannot be undone.

Keep place

Leave queue

What changed after criticism

DECISION RECORD • This is the final composition, not a request for another agent to choose a direction.

REVISION 1

Colour variants of one dashboard

Two different task hierarchies

Consumer: choose and track. Merchant: accept, call and resolve.

REVISION 2

Map-first + huge destination photographs

List-first + optional map + real logo fallback

Missing locations and imagery must not make the interface unusable.

REVISION 3

Requests / waiting tabs on desktop

Both lists visible on desktop

Avoid hiding accepted customers during request triage.

REVISION 4

Large “Leave queue” primary button

Quiet exit with explicit confirmation

The frequent task is checking status, not cancelling.

REVISION 5

“In progress” + promised notifications

“Called” + keep-page-open guidance

A call is not proof of arrival; background delivery is not established.

REVISION 6

Generic low-contrast preview and guessed forms

Plex tokens + explicit contracts and state coverage

The original preview is discarded as the design source of truth.

Consumer / map as a deliberate alternative

FINAL • Business locations only when coordinates exist. Selecting a marker opens the same place details as a list row.

Spotly
